 this program has a major problem when it crashess your operation system. AND IT DOES. BULE SCREEN OF DEATH. not just lock up.

I am running gateway 700 with a 1.8mHz prosseser, 512 M memory, and XP Home W/ SP2.

You have taken away my favorite game site with a Half/a written program.
I want my favorite site back. Either fix the program or drop the problem program.
