Check your pms Mac, it should be in there. Also I downloaded scripts.193 just for the hell of it to see if it worked then, but now I can't even get to the screen where it starts to install. It downloads the file, but then doesn't work. It says 416 Error Requested Range Not Satisfiable or something like that. Then switches to this:

I try to install it again and it happens each time. What's going wrong?
