Subject: Ping problem
View Forum Message <> Reply to Message

I couldn't really find anything on this..

At home i have renegade on a win98 system, although it doesn't run that great because i dont have that great of a vid card on it, i still get a decent ping(cable modem) but here at school (University of michigan) i get great FPS on my winxp box.. i just installed it a lil bit ago cuz i wanted to see how it ran.. but in all the servers i get a ping of 2000+ and cannot do anything.. the net-test thing puts it at >4,>4, so i know speed isnt a problem.. is there any ports i have open up in windows firewall? help pls....
