Okay, so he wants us to help him because he downloaded the file, renamed it to 418, and figured out that won't work? :rolleyes:

At least, he could have made that more clear... "OOPS I FUCKED UP, RENAMED IT TO SOMETHING IT SHOULDN'T BE..."

And yes, I advise anyone to get off ME. The operating system is one of the worst Microsoft has ever put out. It constantly damages itself through overloading files, generating useless file reports that clutter the hard drive until it chokes, mega blue screens, etc...
