Okay, I'll tell you what I need:

Easy to Replicate Tables
Navigation Bar
Fits in 800x600 Screens

That's all. Anything else you want to make can be done, like fancy work. My site is a example of the minimum that I expect of you great web designers. It would be great if you could keep that left side clear for navigation bars (tables of a small size) and easy to replicate tables (like my site, a title row and a content row for the table).

Seriously...

BTW: I need room for a 350x75 logo somewhere on the template. If you do it I'll send $10.00 USD through PayPal. Keep it Neutral though, no gaming related images. If you haven't noticed I like absract images in my websites.

One Last thing: Keep it Javascript and HTML... I want it simple.

How about dark blue to black?
