i have been repeatily trying to get renguard to work.
i've followed the guid to install one topic below this one.
i have every file exsackly like it is in the screen shot and downloaded the patch and renguard from the links.

And even still renguard does not work i'v shut off all my fire walls i've made every west wood game and renguard an exception.

nothing works when i download renguard i save it to west wood folder in one ettemp and run it from there.
other ettempts i just run it and in every ettemp all i get is a window that opens up. It gives me three options.
Modify
repair
remove

i try modify says i can't
i try repair says it don't need to
why would i remove?
i click next says i can't
only thing i can do is press cancel.
i even tried waiting and left that window open for ever.
nothing works .
