Subject: cant leave renegade with CP1.
Posted by knockover on Fri, 14 Jan 2005 04:32:50 GMT

my computer gets stuck at the part that asks if i would like to return to desk top. i click yes and the screen freezes. this only starts to happen after i install the CP1. when i've got the mulity player update and rengaurd installed, it works just fine. i can sometimes get out by doing the Ctrl+Alt+del process but it rarley works that way. most of the time i have to unplug or put my computer into hybernation to leave that screen. does anyone have a clue of what could be up? also, i've uninstalled and reinstalled 3 times now to try and fix it.
