hell ya dual moniter sux

they way u THINK it would work.. it doesnt

when u started the comp WITH the moniter/tv pluged in.. it would be totaly diferent in the options..
then if u just pluged it in for the first time.. was wierd

only way i liked it was on clone.. id put it on the TV and ppl sitting else where could see what im
doin on the comp.. or id play games from my couch/bed

it was ok with nvidia cards cause they sum what had menus and settings built in.. but its MORE
annoying with ATI cards.. cause u have to do it with the normal display menus

i dunno just didnt like it.. havent done it in a whille..
plus i need to get a 50 foot s-video cable

oblivion can i steal your wallpaper pic? muhaha

try style XP.. worked better the ashton imo.. never tried windows blinds
