I still have troubles with the percents, and yes i know math good.

Ill have a code like this:

<td valign="top" align="center" width="100%" height="100%">

*That is the table where everything will go inside. But the table is the right width but is completely flat!

Then i make a new table:

<td valign="top" align="center" width="100%" height="50%">

But the table is completly flat!

The height percentages dont work!

plz help
