gbullj_ball430I believe in evolution, however, I don't believe in the Theory of Evolution. I definitely believe in Natural Selection and the idea that organisms adapt to their environment, and whenever they're taken out of their natural environment, they adapt to the new environment, at least, to the best of their abilities. Christians that dismiss the idea of evolution are nothing but idiots. I'm sorry, but you can't look at history and not see any change among living organisms over the course of even 200 years.

I believe exactly the same. Im going to show my gf these posts as she thinks Im condemned to hell by believing in Natural Selection. You just put it in words I wanted to say it in.

Modern proof of this:

AntiBiotics: They are having less and less effect in prison camps in Russia to TB(Tuberculosis) because when they were first given the anit-biotics, the prisoners did not FINISH the antibiotics and thus, more resistant bacterium were born from those pathogens that survived.

http://www.pbs.org/wgbh/evolution/library/10/4/l_104_09.html

(be sure to view the video there as well for more info)

Bacteria only need to survive antibiotics like that once to build up a resistance. Once they have a resistance, any bacteria that form from them will have that resistance, and any bacteria so much as touching the resistant bacteria will become resistant. This story applies to malaria drugs in Africa. People are so afraid of getting malaria, that they take the drugs, even on false alarms, and build a resistance.

America is not a christian country, so kids shouldn't be taught like it is one. Schools should not hang on to old religious value as a basis not to teach evolution or make up the lame excuse that people are offended by it because of their religion.
