ok bear with me plz if i put this post in the wrg spot but im new at this forum stuff. i've read many of the players problems with rengaurd and i've notseen quite my same issue. my problem is that when i launch my rengade from gamespy server list (the only place i play) i must force rengaurd to close because it just 'NOT RESPONDING' it just sits ther for hours telling me to wait. unless i close it and relaunch sometimes dozens of times. untill it finally runs and starts trying servers. any thing that you've heard of before?
