I've recently (yesterday) gotten back into Renegade after about a year of absence. Today, I've downloaded RenGuard. When I try to download the core patch, it gets to the point where it is almost done and the downloader says the download has been aborted, resume manually, or something to that effect. I've tried running it multiple times. There is no link to the patch on the RenGuard site. I've went into my Renegade folder and ran download.exe. My whole system froze and I finally had to reset my computer. I'm starting to think that it would be better to just stay out there with the cheaters. Any suggestions that might change my mind?
