Maybe you tried when RG network was temporarily down?

Just download the latest version from www.renguard.com and install it....

NOTE: You must install renegade 1.037 patch BEFORE renguard, download your language of the patch from <ftp://ftp.westwood.com/pub/renegade/updates>

I wonder if BHS could somehow have RG 1.04 install check for 1.037 and point people to that ftp folder if they don't have it...would stop a lot of problems people are having...
