the proper course of action (IMHO, to Mac/Crimson/Jonwil/Zunnie: plz sticky and/or post any corrections) would be to:

Provide a testcase in source form (if in source, specify language platform and compiler)
Provide a SS set/Video (vid is preferred) that demonstrates that the testcase actually bypasses RG.
Provide ALL the gory technical details you can (how it works, what limitations it has, how it is installed, ...)
PM it off to Mac/Crimson

Hope this Helps,
T-Bird
