Many more people are joining the Renegade community every day.
Frequently, one of the first questions they ask is ;

Quote:"How do i change the multiplayer practice map?"

This simple application makes it easy to change the gameplay settings of the practice mode and enables you to add your own maps.

EDIT: I've just found out that Dante made a similar tool for this around June of 2002 - I just tried to find it but all of the links were unavailable. So... as i've created the program already, i will still go ahead and release it.
