Subject: Re: Error while starting Rengaurd
Posted by RHINO on Thu, 18 Aug 2005 12:43:20 GMT

Answers to your questions:
1. Yes, the error title is Microsoft Visual C++ Runtime Library.
2.No, my computer name is less than 31 characters.
3.I don't believe I do have the latest .net framework and C++ runtime software.
4.Most of the programs in the processes list I do require. I am currently unwilling to start ending processes unless that IS the problem.
5.I doubt it, it never prompts me with an "Send Error report" screen, when you click "ok", rengaurd closes.

In the last few days, i've just been starting rengaurd about 10 times, until the error does not occur. it seems to me that every time i shutdown and reboot the computer, the more times it takes to work. Also, after the first restart, it starts randomly freezing (1/10 times). I've been un- and re-installing rengaurd to solve this. About a week ago, it started not running Renegade OR Rengaurd. i had to reinstall the game. here are the general system specs if you need them: Microsoft Windows 2K, Service pack 4. Intel Celleron CPU 2 GHz. 523 meg of RAM. ATI Raedon 9600 video card.
Note: I already searched and looked at the other buffer overrun posts. I tried their solutions and they don't work.

--Thanks for your concern--
