---

When I last posted about the LAN exploit message yall said it was not a problem, I kept getting disconnects and when I reboot router it give me an address between 100-103. When I reconnect to RenGuard it said the LAN exploit thing, or when I logon to WOL my nick already used, now it wont let me in at all it says you have been banned by Crimson on 09.10.2005 03:02:28 for eatstring: (My best player)attempting to bypass RenGuard. Goodbye.

Could someone review this.. Thx.

Edit. I am not using a gamemodded executable, I have the default one that Renguard gives you on install.
