When you open LEVELEDIT, you'll see "Presets" Tab on the right hand side. So under presets find "Buildings" then further expand/open you'll get "Refinery". Now you should see two nodes

mp_GDI_Refinery
mp_NOD_Refinery

Select one and then click "Mod" at the very bottom. A new screen will pop wid differnt tabs. Select "Settings". Then scroll down to the very last few options. You ll see "Funds Gatherd" and "FundsDistributedPerSec". Those are the options you need to mess around with. Do the same for Nod refinery.

For reference i have included screen shots, have a look at them.
