CrazyBastard wrote on Mon, 31 October 2005 04:14 This post is to notify all those that have posted in this thread, that I have lied to you. Yes, I have downloaded a 'really old bypass' and attempted to use it...solely to see if it actually worked (admittedly I had my doubts). Knowing me as well as many of you do, I do hack, but only to better myself as a moderator. This is what I was trying to do, as the HT servers never ran RG and I have seen evidence that it can be hacked, I wondered was it really that easy? I had no idea of the consequences - shows how much I know about Renguard. I extend my sincerest apologies to Crimson, and offer her my best wishes with her future endeavours.

boy, you owned yourself.

Quote: I will share a little secret with you: I used the first version of final renegade in a game I hosted once, along time ago when I was a n00b, to test it out. Obviously things like fully-automatic mammoth tanks made the game lag worse than RG and hence I didnt use it again. Once I left that game I went into the HazTeam server without restarting ren... Obviously FR was still operating even though I had removed it from the data folder... I killed a mod in one hit and was like OMG! and left the server immediately after I realised it was still on. I didnt go back into the HT servers for a week or so, as I was scared shitless that I would be banned. Luckily, I wasn't so much as temp banned for it. From that day, I have NEVER used a cheat - not even for testing purposes.
