The screenshot shows the GameSpy Arcade 2.0.3 interface. On the left, there are navigation buttons for Home, Servers, Files, Demos, Chat, and Arena. Below these are sections for 'YOU ARE HERE:' (Command & Conquer Renegade) and 'My Games' (listing titles like Middle Earth Honor, Command & Conquer Renegade, etc.). The main area displays a list of servers for 'All Renegade Servers'. A 'Blackhand Studios Core Patch Downloader' window is open, displaying the following text:

**Blackhand Studios Core Patch Downloader**

Core Patch 1 Introduction  
=====

From the Creators of RenGuard, Blackhand Studios(tm) proudly presents "Core Patch One". CP1 is the first unofficial C&C Renegade update which fixes several bugs identified in the game. Many fixes and changes were made to the original maps including additional sounds, more effective vehicle blockers, prevent wall jumping, and other special effects. The much hated ability to do base to base attacks on certain maps has been prevented. Multiplayer radio command icons are now available, Obelisk power will be audible, seamless interaction between the Renegade client and the Free Dedicated Server will introduce server-side enhancements that make available the best effects ever achieved in Renegade multiplayer gameplay.

The people who have been eager to play the best Fan-made maps available at this moment haven't left out. Six incredible maps, C&C\_FieldTS, C&C\_Gobi, C&C\_Sand, C&C\_MutationRedux, C&C\_Siege, C&C\_Snow are all available through this update. Gobi, Sand, and Snow were among several maps intended to be released by Westwood Studios, and through the efforts of prolific level designer

Install Core Patch
