[RGAslyfox wrote on Mon, 09 January 2006 10:33]I have a Nvidia Geforce Fx 5500 128 mb. Normally, my fps stays about the 60 mark, but after I re-install renegeade, it drops frequently to 1-4 fps. The sudden drop makes me lag, and it seems to occur every few minutes. I am running an Intel Pentium 4 2.4 Ghz Windows Xp Sp2 with 768 MB RAM with Direct X 9.0c

Also, another problem I seem to be encountering is, when I connect to Xwis, it says the ping for almost every server is about 996, yet when I join a few, the ping is around 200. Is this an error with Xwis?

Those 996-999 pings mean that the server's firewall blocks ping packets...like a good firewall should
