Subject: Nobody can see the servers I make except for my lan. Help.
Posted by maschief on Fri, 27 Jan 2006 21:00:04 GMT

It doesn't matter rather I make a server on a public network, or what game I do it with, nobody can see the servers I make except the people on my LAN. It's got me kind of baffled because I disabled firewall and enabled DMZ, to no avail. I figured I would come here since alot of people here seem to have good knowledge on this sort of thing.

Any help or suggestions would be greatly appreciated.
