Ok Thanks.

I am trying to make a M03 serverside map and i'm having a problem with the controllers. The multiplayer Ref controller does not work with that Refinery and the single player Reg controller causes Renegade to crash when you use K.

Does anyone know how i could fix either of those.

The reason why I wanted that one specific script was so i could have it so when you take out the Powerplant. It destroys the Obelisk controller which will than end the game.
