[View Forum Message](#) <> [Reply to Message](#)

This is a program that works to clean your Renegade directory of unimportant files for example, the client/renlogs logs.

Requirements

.Net Framework 2.0

Options

Delete

1. Client Logs
2. Crash Logs
3. ReadMe's
4. Patch Notes
5. Server Logs (If Any)

How To Use

For the client open the program, press "Change Dir" and select "Renegade.exe". After select which options you would like to clean, and press "Perform Actions". A Message Box will appear once the program has finished cleaning.

For the server, do the above but instead of selecting "Renegade.exe" choose "RenegadeServer.exe".
