I am having this same problem. I have just installed the game the other day, using the First Decade disk, I tried removing the (tm) aswell but I still keep getting that same message.

And also, Now I cant even open the game even for single player. because It says something like "error loading renguard.dll. Please make sure renguard is installed properly"

Please someone tell me how I can fix this problem because I very much enjoy playing on the Jelly-Server, however, I cant because I dont have Renguard.
