I remember reading a similiar problem here but I can't find it under the search function. This has happened to me before, and to my friend and I thought I knew how to fix it but that was not the case

ok, ss of the problem:

Upload photos with [ScreenDump.NeT](#)

I remember reading that a font change in stylemgr.ini caused the problem, but I got a friend to send me his, overwrote, same problem I also didn't install any CP'S or anything, was just playing ingame, died, respawned, bam, text problem. The text is now lighter in color and grainier, and almost makes the game unplayable so I would like to get this fixed ASAP.

Thanks for the help,
trooprm02
