Sorry for the double post but my edit button does show up (javascript error).

Anyways im missing the "presets" folder. When I had a freind email me the files/folders I need and put it in. It all worked. only i receive that bloody error message and it closes.

This is after i plug in all the missing things. Notice how i now have the [+] and all is in place. Only i get this error.

This is from my editorslog.

I belive the problem is a .w3d missing.
