I could use some help..

Whenever Rengaurd tries to install Core Patch2 for me, it scans the maps, and says the pre-check is done, then it just says there are errors and rengaurd disconnects from the network... anyone know wats going on?? it doesnt even say wat the error is. I have the first decade loaded, and it checks the files, Always2.dat, canyon, city, city flyin, complex, field, fieldTS, hourglass, islands, mesa, snow, under, volcano, walls, and walls flying. If anyone knows anything about this plzz let me know.. thanks.
