Subject: How to distinguish a good player and a damage hack?

I'm asking because I don't know nothing about damage hack or any other cheatings. But I'm curious if an in-game MD could tell the difference or not. If the MD runs the server, I guess there probably would be ways to find out which player is cheating, not simply saying one is cheating because of relatively high score or accurate shooting, or not running renguard.

BTW: I really looking forward to the next release of renguard that can support more latest OSs.
