Crimson wrote on Tue, 31 October 2006 15:52The stats for Jelly are messed up because they had both their AOW and mini AOW named identically which resulted in fucked data. In fact their utilization is definitely a lot higher. If I can figure out when they fixed the names, I can find a more accurate utilization stat.

When we launched our CP-maps server we had to change names for the Mini and large AOW. I don't know if you can look up the exact date with that info, else it has definitely been 1 month ago.

Could these stats be hosted/updated too? I find them very usefull, very nice!
