So I got access to my SpeedTouch 585 modem/router and checked if UPnP was enabled. It was enabled so that can't be the problem.

- -My Windows Firewall is off
- -The router firewall is off
- -Renguard worked before I moved to this house so I know it can work and it up to date.

I included a screenshot of my problem which is the same as nopol's.

I can add Games and Applications to the routers port forwarding

I just need to know what ports or port ranges Renguard uses.
