I have no idea what happened to that post, is:

1)is that "SSCTF1.3.1WFDS-2.9.2" folder needed?
2)I thought having an objects.ddb in my data folder would cause the server to not be listed?
3)if i rename it to objects.aow how will SSCTF be able to read it?

2 more questions:

4)To run the CTF, I cant have CP2 installed on the serv appearently, true?
5)So I should only have the FDS, and SSCTF only?
