The alt-tab crash still occurred even with Xfire turned off, so it's not caused by that. So far it has happened every time I have tried to alt-tab.

System specs;

Pentium 4 3.0ghz +HT

1024mb RAM

Radeon 9800se 128mb

Software;

Catalyst Control Center 1.2.2243.38605

Graphics Driver Version: 8.231.0.0

DirectX December 06 redistributable

EDIT: Also attached a crash-dump from when I tried it with xfire turned off, incase it helps at all.
