Well, what I suggest is look for any Realtek services that are running and disable them. You don't need a service for your sound to function, so that should fix the problem. If there are no Realtek services running (which there probably are in this case) then I wouldn't know what to suggest.

1. Look in the Task Manager Services list
2. Disable any Realtek services or startup items in MSCONFIG
3. Disable any Realtek services in Control Panel -> Administrative Tools -> Services
