Subject: Moniter Shaking.
Posted by Renerage on Wed, 28 Mar 2007 07:54:36 GMT

Ok, I leave my computer on while I'm at work, I come home, and find the moniter screen shaking..at first, I thought I was trippin out or something, but it didnt stop.
I tried unplugging it, turning it on and off, plugging in and out from behind the tower, "degausing" , re-sizing the screen...

Nothing seems to work, and even now as i type this, its shaking.

Its not a massive shake, like, to the point where the words are shifty, its just annoying as fuck seeing them go back and forth....

Any way on to fix this problem?
