dutchduc wrote on Fri, 13 April 2007 09:50Try Spybot- search and destroy.

This little program solves most of my problems. Maybe yours as well

Grtz dutchduc

www.spybot.info is the link to it and it is very good indeed. If this doesn't work, then just use google, it's your best friend! Search for 'remove errorprotector' and you'll find a lot of useful sites.

Always remember to do virus and spyware scans in windows safe mode.

You know, Google really is your best friend.
