Hello ,

Recently i got some problems with renegade ,
Or the game shuts down suddenly to desktop (this happens like 3 minutes after I am ingame)
or 2 I get a blue screen without any error message and I have to shut the system down. I have
never encountered any problems like this on my laptop yet

Centrino Pentium M 1.6 Ghz
60 gb HD 7200 rpm
Ati radeon 9700 mobile (128 mb)
1 Gigh ram

Anybody knows what this could be??

thx
