I got this message from renguard. [17:14] Message from RenGuard: You have been banned by Crimson on 26.04.2007 22:09:23 for typhon102: Attempting to use stealth hack. Goodbye. This is a fresh reinstall of both renegade and renguard both were redone because I had a registry problem that I fixed. I didn't even get logged on once before I got this. I don't know if my registry problem or the reinstalling could have caused this but can someone help at all? I only play n00bstories and have never been accused of cheating at all, I don't really know why this happened or how because I have never tried to cheat and would need to figure out how it worked to get this. I really don't even need renguard other then I support what you are doing and I like the n00bstories bots that require renguard. If I have to play without it I can and will, but I will miss the features. I hope you can help thanks.
