Oh yes, rm5248! I did not think when I wrote "never." lol! I meant it is impossible in the next 100 years. I am sure we can one day go out there in big ships (like in the movies) and back.

I believe Americans went to the moon...every prrof is there...I absolutely dislike the conspiracy theorists in that matter. lol!

The planet that we need the most now is one that has big oil! Not one that can support life. hahah! That would be awesome...a planet full of oil!
