Subject: how to make rene work on vista?
Posted by TSS888 on Tue, 05 Jun 2007 05:17:53 GMT

I installed rene and apb on my new com correctly. Then when i launched either of them, it said that i need to update my direct3d version to be compatible with the scripts (3.2.3).

I think its because my directx version is 10... and they want 9.0c. So i went to download directx 9.0c and tried to install it. But it did not work (worked for my friend though   )

So, ya, please help!!
