Ok, so I was downloading the newest scripts with this script installer program that my friend made. So after it was all downloaded and stuff I tried to go online and play a game. While loading into the game, it keeps freezing on the loading page. It doesn't actually freeze on the load screen cause it actually loads cause I can hear the game goin on in the background but all I can see is the load screen and it doesn't go away. Help somebody!!!! Thanks!!!
