I seriously doubt that it's not one of the first models you've made. The complete lack of quality proves otherwise.

YOUR mother

So we see who is the beginner.

You are so extremely immature and overwhelmingly childish that it isn't even funny. You have provided more than enough proof that you are nothing more than an illiterate, immature and mentally retarded pre-pubescent (not to mention talentless and completely unskilled) child.

Ugauga01And i know that it is possible to make a laser.

I saw some screens of it in a forum that URL i will not say.

I asked the creator how to make that laser and he told me.

:twisted:

So why don't you show us the screenshots of it? Is it because you actually don't have any screenshots or proof that a laser pointer can be attached to a weapon, but like many other things, you can't admit it?
