shrugs I followed this skin guide.

http://www.cncden.com/renegade_skin_tut.shtml

It says to disable aplpha. What exactly will that change? I've editted a few skins saving them that way and saw no noticable difference. It's worked for every skin without problem, and when one did go black, I used DXT5 and it worked (I never mentioned to try DXT5 in this case becuase I thought the SBH wasn't one of the special ones that needed it, since the stank doesn't).
