Subject: Renx doesn't work anymore

Umm, I click my Renx Icon, I get the loading cursor, wait for like 20 seconds, the cursor goes away and the program never comes up.

I go to the task manager, and the program isn't in the task list, but when I go over to the processes tab, I see "renx.exe" is running...

Anyone know whats up? Should I reinstall RenX?

..Edit: I just reinstalled it, and it still doesn't work. I even tried installing gmax and RenX into a different directory, and it still doesn't work..
