Subject: strange gmax-install problem
Posted by Di3HardNL on Wed, 05 Sep 2007 19:57:42 GMT

I had to reset my harddrive a week back.. so i was just about to install Gmax again, when I go to www.renhelp.net to download gmax again, it all works, when i click it to install it everything seems to go fine.

but then suddenly it opens a Fraps-install screen :S
I dont think that is what suppose to happen.. lmao

I dont think anyone can help me with that, but I thought maybe some of you have the same issue? its making me real pissed cause i just had some great ideas for new models for renegade

thanks
