---

all i can say is that my server crashes randomly.

people can join and play, but after a few seconds the server crashes.

it sometimes waits till it switches maps to crash.

there doesnt seem to be any set action or command that crashes it, it just... crashes.

i cant find the crash dump file.

id really like to fix this problem, so post here or join me on irc: irc.aohost.co.uk #qwertwertserv

thanks

P.S. the crashes are RANDOM.
