Weee i did it with a stank on Hourglass, and it flew HIGH! then i jumped out. Somehow your guy will keep falling faster and faster, and your 'graphics' will be like copied 4 times, thus you see yourself 4 times copied, and 4x your name, and if you focus on your 'main view character' it will flash fast on/of en then suddenly you die

See Fall height

Not so special but still funny to try.

Edit: Is there also reason, that when you put the buggy mass to 0.00, everything dies (Harvy, Infantry, Vehicles, yourself) and that your game also almost crashes? it seems to happen each time the buggy gets back in the game : when the cargo appears and the buggy too. Also, you will see 'blue hell' or something, it looks like the blue hell.
