No, you just need to put in the one that ends in _ext or something.

However, I would say don't bother with those. Because it can be really confusing.

Go here: <http://www.renhelp.net/index.php?load=Downloads&>

Scroll down to "Useful Files"

Then download the "Buildings for RenX with Proxies"

That should solve all your problems. The good thing about these buildings is that the spawn points and purchase terminals are ALREADY there, so no need to add them in level edit, thus saving you lots of time.

Edit: one thing to take note of, the buildings in that download are made for flying maps. You could always delete the Ramps, however.
