What does that command do?

What CPU do you have Blue_Leader? Renegade online is rather CPU intensive. That video card should be able to play Renegade, but not with high resolution/AA and all that. My old geForce4 Ti4200 (much better than an FX 5200) managed 1280x960 resolution with 4xAF and 2xAA as a maximum (remember AA and AF penalized the GeForce4 series hard) without loosing too much FPS.
