any help on this please?

this is the vet system im having problems with

<http://www.renegadeforums.com/index.php?t=msg&th=26833&start=0&rid=2> 2699

and this error keeps coming up

error C2220: warning treated as error - no 'object' file generated

I have tried a multitude of things but still that error shows up even if I delete the line it will show up on the next line that uses obj

If I remove that one line giving the error it just moves to another line

and the thing is when I remove that line it starts giving errors on the unmodified SSGM Source.

it should be the same as the one in the link above unless my friend edited it if that case i can send someone the code or just post it here...
